                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             /note="Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; 1st strand cDNA was prepared from pooled bulk breast tumor tissue, and was then primed with a Not I ollgo(dT) primer. Double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Not I and cloned into the Not I and Eco RI sites of the modified pT7T3 vector. This library is the normalized version of NCI_CGAP_BI1.1. Library was constructed by Bento Soares and M. Fatina Bonaldo.

/note="Vector: pspor1; Site_1: Sal1; Site_2: Not1; RNA was prepared from a pool of 6 anonymous Wilms' tumor RNAs. RNA was prepared by acid-phenol, followed by one round of oligo dr selection. CDNA library preparation was with the BRL/Life Tech. Superscript Plasmid system. An oligo-dr Not1 primer for first strand synthesis generated geggecoc(t) at the 3' end of the clones. A 5' Sal1 adaptor was used with sequence 5'-gtogaccoagegtcog-a was used with sequence 5'-gtogaccoagegtcog-selecting cDNAs were size selected (average size 2 kb), Not1 digested, and ligated into Not1/Sal1-cut pSPORT1. Library was constructed by Dr. Manfred Gessler."

/ncce="Organ" Displayed; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site_1: Not I; Site_2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHil9W, testis NHT, and B-cell NCI_CGAP_GCBI) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hypridization reaction. The driver was PCR-amplified CDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Scares and M. Fatima Bonaldo. "
